

Physician Certification Pattern Review

2022 Annual Report

October 1, 2020 - September 30, 2021

Physician Certification Pattern Review Panel
Board of Medicine
Board of Osteopathic Medicine

Board of Medicine and Board of Osteopathic Medicine Physician Certification Pattern Review 2022 Annual Report

Under section 381.986(4)(j), Florida Statutes, “The Board of Medicine and the Board of Osteopathic Medicine shall jointly create a physician certification pattern review panel that shall review all physician certifications submitted to the medical marijuana use registry. The panel shall track and report the number of physician certifications and the qualifying medical conditions, dosage, supply amount, and form of marijuana certified. The panel shall report the data both by individual qualified physician and in the aggregate, by county, and statewide.”

The Physician Certification Pattern Review Panel (Panel) is responsible for reporting its findings and recommendations by January 1 of each year to the Governor, the President of the Senate, and the Speaker of the House of Representatives. This report analyzes data from October 1, 2020, through September 30, 2021.

Physician Certification Pattern Review Panel

Chair and Vice Chair

Sandra Schwemmer, D.O., Chair
Andre Perez, Consumer Member, Vice Chair

Members

Jorge Gadea, D.O.
William Kirsh, D.O.
Jorge J. Lopez, M.D.
Luz Pages, M.D.
Michael Wasylik, M.D.

This report provides a summary of the data for the 2022 Annual Report, and comparisons between the data from the 2020 and 2021 Annual Reports. All physician certification data were extracted from the Medical Marijuana Use Registry (MMUR). Physician licensure information was extracted from the Division of Medical Quality Assurance (MQA) Licensure Database.

1. **2020 Annual Report:** 12 months of data, October 1, 2018, through September 30, 2019.
2. **2021 Annual Report:** 12 months of data, October 1, 2019, through September 30, 2020.
3. **2022 Annual Report:** 12 months of data, October 1, 2020, through September 30, 2021.

Overview of the 2022 Annual Report Contents

Date Range for 2022 Annual Report Data

October 1, 2020 through September 30, 2021

Purpose of the Panel

The Panel reviews physician certification patterns, produces an annual report including recommendations, and reports the findings to the Governor, the President of the Senate, and the Speaker of the House of Representatives by January 1 of each year, pursuant to section 381.986(4)(j), Florida Statutes (F.S).

Highlights of Trends in Physician Certifications

1. Based upon a review of the 2020 through 2022 annual reports, the data have reflected a steady increase in the number of physician certifications, physician certifications containing at least one order for smoking as a route of administration, the number of qualified patients, and qualified physicians.

 Physician certifications: 460,469 to 664,779 to 975,267.

 Certifications with smoke order(s): 136,861 to 584,227 to 916,366.

 Qualified patients with certifications: 291,865 to 443,888 to 653,190.

 Qualified physicians with certifications: 1,487 to 1,625 to 1,684.

2. The greatest number of certifications were issued by a small percentage of qualified physicians. This ratio has been increasing as more physicians see more patients, and more patients continue with subsequent certifications.

2020: 61% of certifications were issued by 9% of qualified physicians; 1,000 + certifications each.
2% of certifications were issued by 50% of qualified physicians; 1-49 certifications each.

2021: 71% of certifications were issued by 12% of qualified physicians; 1,000 + certifications each.
2% of certifications were issued by 47% of qualified physicians; 1-49 certifications each.

2022: 80% of certifications were issued by 16% of qualified physicians; 1,000 + certifications each.
1% of certifications were issued by 45% of qualified physicians; 1-49 certifications each.

3. The ordered average daily dose (mg) has shifted each year. This year, using a geometric mean calculation, three of the five routes of administration for low-THC cannabis had slightly lower average daily dose amounts. In contrast, medical marijuana average daily dose amounts have increased slightly across all routes of administration. Smoking as an appropriate route of administration remains consistently at the top of the limit allowed by statute, 2.5 oz. per order period.

I. General Process for Medical Marijuana Certifications

1. Requirements for Qualified Physicians

Physicians qualify to order medical marijuana if they hold an active and unrestricted license as an allopathic physician under chapter 458, Florida Statutes, or an osteopathic physician under chapter 459, Florida Statutes, and successfully complete an approved 2-hour Continuing Medical Education course and examination. The course is repeated before the biennial license renewal deadline. All Florida-licensed physicians must provide information for a primary practice location. However, physicians may self-report as “Not Practicing”, maintain an active license, and not provide a primary practice location. See Table 1.

Table 1. Total number of Florida-licensed physicians qualified to certify patients for medical marijuana.

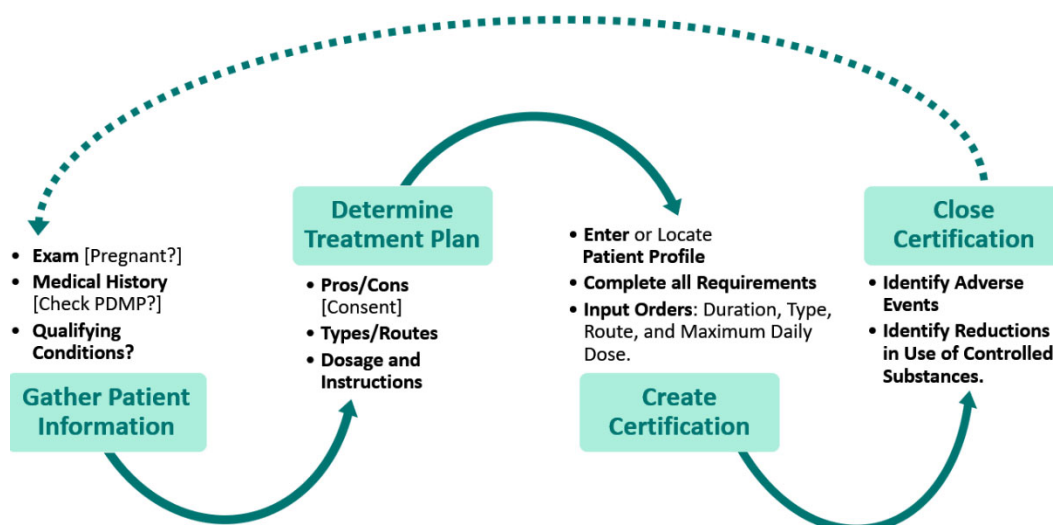

Reported Physician Practice Location Address	2020 Report ¹	2021 Report ¹	2022 Report ¹
In a Florida County	2,552	2,700	2,563
Not Practicing	34	39	32
Out of State	73	90	94

¹ Data cycle is October – September prior to January 1st publication date. See page i.

2. Requirements to Issue a Physician Certification

Figure 1 illustrates the general process to issue a physician certification. Currently, a physician certification can be issued only if the qualified physician conducted a physical examination while physically present in the same room as the patient, completed a full assessment of the patient’s medical history, reviewed the Prescription Drug Monitoring Program (PDMP) database, and diagnosed the patient with at least one qualifying medical condition. Qualified physicians are responsible for the determination that the medical use of marijuana would likely outweigh the potential health risks for the patient. Physicians must complete the medical consent form and, when appropriate, submit required documentation as part of the certification process. See section 381.986(4)(a-g), F.S.

Figure 1. General process for determining if medical marijuana is an appropriate patient treatment.

Physicians must submit required documentation and maintain up to date certification information in the MMUR. When closing a certification, physicians must note adverse events or reductions in use of other

controlled substances. To continue to use medical marijuana as a treatment for the patient’s medical condition(s), physicians and patients must complete the entire process as a new certification.

3. Requirements for Patients to Obtain Medical Marijuana

Figure 2 illustrates the general process for patients to obtain medical marijuana. Once a qualified physician determines that the medical use of marijuana would likely outweigh the potential health risks for the patient, a certification is created for the patient. Certifications contain orders with a maximum duration of 35 to 70 days depending upon route of administration (Edibles, Inhalation, Oral, Smoking, Sublingual, Suppository, or Topical).

Current certifications have a maximum duration of 210 days, or three consecutive 70-day orders (six consecutive 35-day orders for smoking). Patients are allowed one current (active) certification and one pending (future) certification. Each order has a start and end date. Physicians can modify current orders.

Once a physician certification has been issued, first-time qualified patients must obtain a Florida Medical Marijuana ID card. If medical marijuana as a treatment for the patient’s medical condition is continued, the card must be renewed every 12 months. Orders can be filled at any Medical Marijuana Treatment Clinic (MMTC) in Florida.

Figure 2. General process for Florida residents who are interested in obtaining certifications for medical marijuana.

4. Reporting Physician Certification Data

- Physician certification data for this report were pulled directly from the Medical Marijuana Use Registry rather than vendor-generated reports used previously. This investment toward internal control of data gives the Office of Medical Marijuana Use (OMMU) more support for its Quality Assurance team, a critical feature in live data systems. Increased data access will allow rapid reporting by developing dashboards.
- Physician primary practice locations (addresses physicians provide in the Practitioner Profile) are collected on October 1 each year from the MQA licensure database.
- Section 381.986(4)(j), F.S., requires the Panel to report physician certification data “both by individual qualified physician and in the aggregate, by county, and statewide.” Please see the separate document, “Data Tables for Physician Certification Pattern Review, 2022 Annual Report.”

II. Trends in Physician Certifications

Table 2 and Figure 3 show the growth in number of physician certifications, individual patients, and qualified physicians. Patient counts reflect distinct individuals; patients may have more than one certification in each time period.

Table 2: Growth in physician certifications for medical marijuana use.

	2020 Report	2021 Report	2022 Report	Percent Change 2021 to 2022
Certifications	460,469	664,779	975,267	47% ↑
Individual Patients	291,865	443,888	653,190	47% ↑
Qualified Physicians with Certifications	1,487	1,625	1,684	4% ↑
All Qualified Physicians	2,556	2,700	2,563	5% ↓

Figure 3. Number of physician certifications and patient counts in the 2020 Annual Report, 2021 Annual Report, and the 2022 Annual Report.

Table 3 provides information on how certification counts can vary by qualified physician. Only qualified physicians who have issued physician certifications during the time periods for the three data sets are included. The number of certifications has increased more than the number of qualified physicians issuing certifications, as can be seen in the average number of certifications per physician and the range in number of certifications per physician. This is illustrated in the three pie charts in Figure 4 and Figure 5.

Table 3: Number of certifications in each data set.

	2020 Report	2021 Report	2022 Report
All Certifications	460,469	664,779	975,267
Average number of certifications per physician	130	410	579
Range in number of certifications per physician	1 to 8,838	1 to 16,604	1 to 27,694
Median	50	59	69
Mode	1	1	1
Individual Patients	291,865	443,888	653,190

Figure 4. Trends in the percentage of physicians whose total number of certifications fall into one of four groups. Percentages are based on the number of physicians in each group divided by the total number of physicians in that data set.

- 1 certification per physician
- 2 to 49 certifications per physician
- 50 to 999 certifications per physician
- 1,000 or more certifications per physician

2020 Annual Report (N=1,487)

2021 Annual Report (N=1,625)

2022 Annual Report (N=1,684)

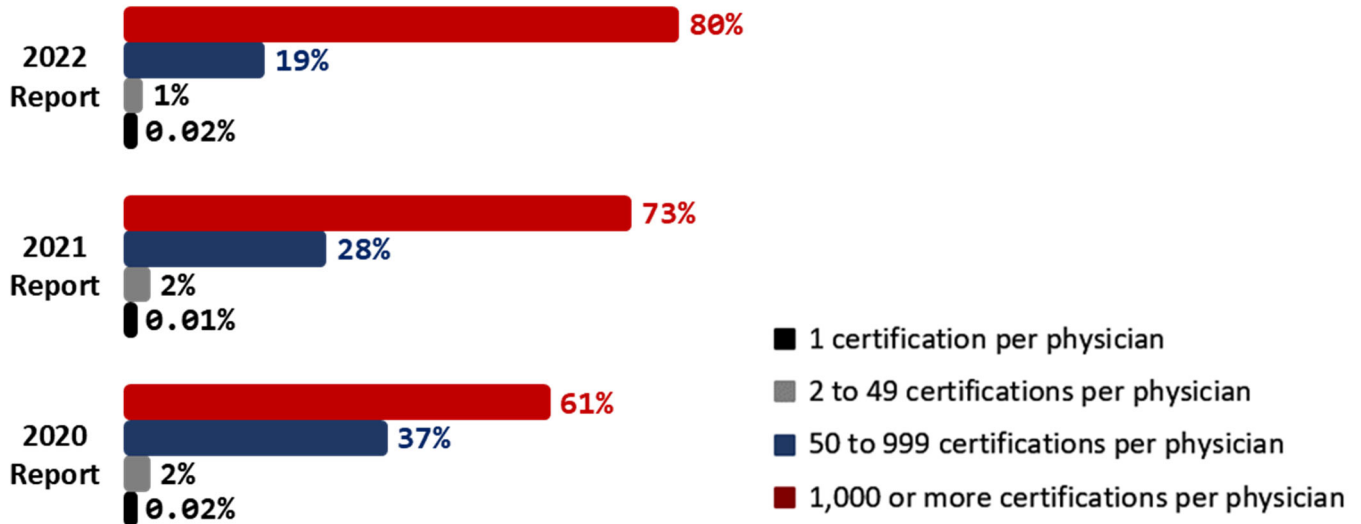

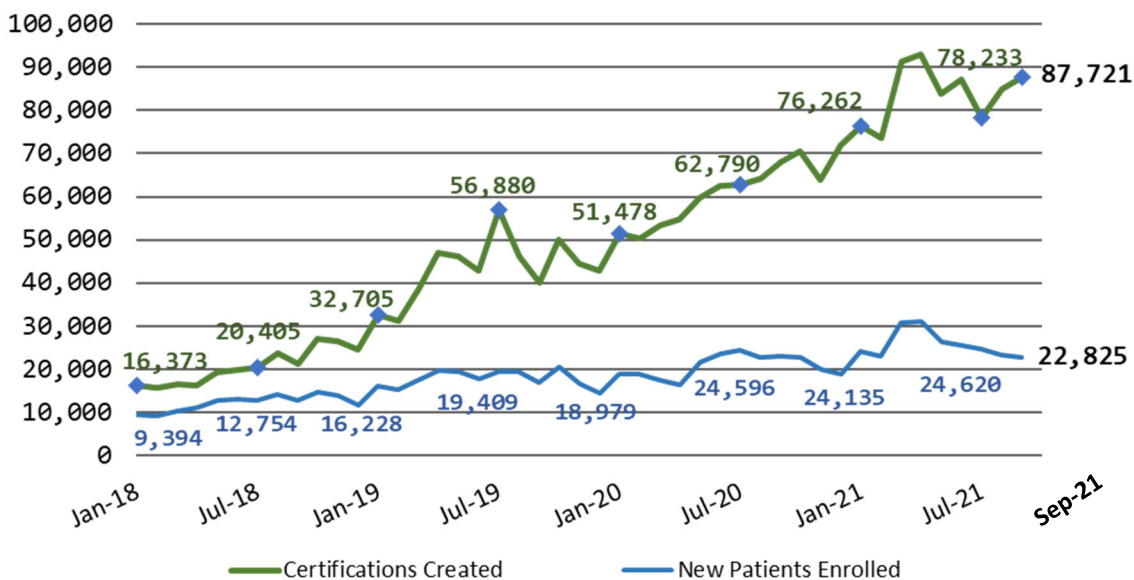

Figure 5. Percentage of certifications issued by physicians in each of the four groups. For example, in the 2022 Report, 0.02% of certifications issued were from physicians (N=75) who issued only 1 certification and 80% of certifications issued were from physicians (N=269) who issued 1,000 or more certifications. Physician counts in each group are in Figure 4.

Two changes occurred during the past four reporting periods: first, marijuana in a form for smoking became available for medical use on March 18, 2019, (Senate Bill 182) and second, edibles as a route of administration became available on August 27, 2020, when the Department of Health issued production standards. See Figure 6.

Figure 6. Month and year counts for certifications created and newly enrolled patients (no previous certifications) from January 1, 2018, through September 30, 2021. Point values for January and July are shown for each line. The September 2021 values are in black.

III. Trends in Patient Qualifying Condition

Physicians are required to determine that a patient’s medical condition meets one of the qualifying conditions listed in section 381.986(2), F.S. The list is included in Table 4. Patients may have more than one qualifying condition recorded in the MMUR by a qualified physician and more than one certification.

Table 4: Trends in the total number and percentage of qualifying conditions reported in each data set. Conditions listed in **bold font** are the top three qualifying conditions reported by physicians.

Qualifying Condition	2020 Report		2021 Report		2022 Report	
	Number	Percent	Number	Percent	Number	Percent
(a) Cancer	36,749	6.9%	51,420	4.6%	61,408	3.8%
(b) Epilepsy	8,698	1.6%	15,625	1.4%	18,524	1.1%
(c) Glaucoma	7,867	1.5%	10,834	1.0%	13,507	0.8%
(d) Positive status for human immunodeficiency virus (HIV)	3,861	0.7%	7,490	0.7%	9,192	0.6%
(e) Acquired immune deficiency syndrome (AIDS)	626	0.1%	1,661	0.1%	2,031	0.1%
(f) Post-traumatic stress disorder (PTSD)	128,030	23.9%	406,542	36.3%	627,521	38.7%
(g) Amyotrophic lateral sclerosis (ALS)	408	0.1%	9,564	0.9%	10,167	0.6%
(h) Crohn’s disease	7,931	1.5%	23,006	2.1%	30,416	1.9%
(i) Parkinson’s disease	4,888	0.9%	8,192	0.7%	8,485	0.5%
(j) Multiple sclerosis (MS)	6,760	1.3%	134,245	12.0%	177,696	11.0%
(k) Medical conditions of the same kind or class as or comparable to those enumerated in paragraphs (a)-(j)¹	135,088	25.2%	273,979	24.4%	438,690	27.1%
(l) A terminal condition diagnosed by a physician other than the qualified physician issuing the physician certification	870	0.1%	2,717	0.2%	3,648	0.2%
(m) Chronic nonmalignant pain	193,941	36.2%	175,904	15.7%	219,706	13.6%
Total qualifying conditions reported:	535,717		1,121,179		1,620,991	
Total number of certifications:	460,469		664,779		975,267	
Total number of individual patients:	291,865		443,888		653,190	

¹ Physicians are required to provide information on certifications under qualifying condition (k) same kind or class.

Physician Certification Pattern Review, 2022 Annual Report

In September 2020, the Panel requested information on the top five medical conditions qualified physicians recorded most often in the MMUR under qualifying condition (k). In November 2020, the Panel asked for more detail on the medical conditions of patients certified under qualifying condition (f), PTSD.

Data for Tables 5, 6, and 7 are physician entries to the MMUR under qualifying condition (k). These data were collected separately from the data in previous tables and as such will vary slightly. For live data systems like the MMUR, each download is a snapshot in time; small differences in the data are expected. Data submitted using a paper copy of Form DH-MQA-5027 (rev. 02/2018) are not included.

Table 5. Patient medical conditions¹ reported by physicians for 1% or more of patients certified as qualifying condition (k) “medical conditions of the same kind or class as...” in the 2021 and 2022 Annual Reports.

Patient medical conditions by category using the World Health Organization’s International Statistical Classification of Diseases and Related Health Problems	2021 Report		2022 Report	
	Number	Percent	Number	Percent
1. One form of “anxiety” (e.g., generalized anxiety disorder, depression, insomnia, panic attacks, sleep disorders).	27,517	44%	150,574	41%
2. One or more symptoms, diseases, or disorders for “chronic pain from neuro or muscular degeneration or injury” (e.g., cervical or lumbar pain, degenerative disc/joint disease, muscle spasms, myopathic encephalopathy, restless leg syndrome, rheumatoid/osteoarthritis).	25,237	43%	107,668	29%
3. Only “chronic pain” or “pain” reported.	4,073	7%	32,246	9%
4. One or more forms of “anxiety” AND one or more forms of “chronic pain from neuro or muscular degeneration or injury.”	1,291	2%	22,435	6%
5. Two or more forms of “anxiety” as listed.	770	1%	35,316	10%
Others with 323 or less: digestive, respiratory, infectious disease, circulatory, genitourinary, genetic, skin and connective tissue, ophthalmological.	478	<1%	10,083	3%
Unable to determine	2,964	5%	12,994	4%
Number of medical conditions reported:	62,330		371,316	
Number of qualifying condition (k) certifications:	270,817		438,690	
Number of distinct patients in this table:	197,178		273,140	
Number of physicians in this table:	1,056		962	

¹ Patients may have multiple certifications and 1 to 5 medical conditions.

Physician Certification Pattern Review, 2022 Annual Report

In the MMUR, all certifications using qualifying condition (k) “medical conditions of the same kind or class as...” require identification of one or more qualifying conditions (a)-(j) the physician identifies as a match to the patient’s medical condition(s).

Because a patient’s certification may include multiple medical conditions, and/or multiple matches to qualifying conditions (a)-(j), the records were sorted to review only those certifications with *one other qualifying condition (a)-(j)*.

In this reporting period, 78% (365,385 of 438,690) certifications met these conditions. See Table 6.

Table 6: Number and percentage of times each qualifying condition (a)-(j) was identified as being the “same kind, or class” as the patient’s medical condition. Conditions listed in **bold font** are the top three reported by physicians. Included are counts for qualifying conditions (l) and (m) even though these choices do not meet the requirements for qualifying condition (k) outlined in statute.

Qualifying Condition ¹	2022 Report	
	Number	Percent
(a) Cancer	4,064	1.03%
(b) Epilepsy	6,148	1.6%
(c) Glaucoma	379	0.1%
(d) Positive status for human immunodeficiency virus (HIV)	1,580	0.4%
(e) Acquired immune deficiency syndrome (AIDS)	186	0.05%
(f) Post-traumatic stress disorder (PTSD)	212,318	53.9%
(g) Amyotrophic lateral sclerosis (ALS)	328	0.1%
(h) Crohn’s disease	12,372	3.1%
(i) Parkinson’s disease	2,189	0.6%
(j) Multiple sclerosis (MS)	125,821	31.9%
(l) A terminal condition diagnosed by a physician other than the qualified physician issuing the physician certification	99	0.03%
(m) Chronic non-malignant pain	28,335	7.2%
Total <i>single</i> qualifying condition reported:	365,385	
Number of distinct patients in this table:	176,760	
Number of physicians in this table:	794	

¹ Qualifying condition (k) patient medical condition(s) may align with more than one qualifying condition, only certifications with one (a)-(j) qualifying condition noted are shown here.

Physician Certification Pattern Review, 2022 Annual Report

Table 7 provides an expansion of qualifying condition (k) data requested by the Panel in the 2021 recommendations to staff. The Panel was specifically interested in patient medical conditions physicians identified in certifications that identified qualifying condition (f) Post-traumatic stress disorder (PTSD) as being the same kind or class or as comparable to the patient medical condition.

There were 210,358 medical conditions reported in 232,580 certifications for 176,928 patients by 812 physicians that met the Panel’s request. Medical conditions reported by physicians for 1% or more of patients with qualifying condition (k) certifications were grouped into six categories.

Table 7: Number and percentage of patient medical conditions physicians reported as being the “same kind, or class” as qualifying condition (f) Post-traumatic stress disorder (PTSD) under qualifying condition (k) requirements, October 1, 2020, through August 31, 2021. Medical conditions listed under qualifying condition (k) certifications that do not use (f) PTSD are provided for comparison.

Patient medical conditions ¹ by category using the World Health Organization’s International Statistical Classification of Diseases and Related Health Problems	2022 Annual Report			
	Listed PTSD		No PTSD listed	
	Number	Percent	Number	Percent
1. One form of “anxiety” (e.g., generalized anxiety disorder, depression, insomnia, panic attacks, sleep disorders).	147,133	67.8%	1,857	1.3%
2. Two or more forms of “anxiety” as listed.	34,100	15.7%	626	0.4%
3. One or more forms of “anxiety” AND one or more forms of “chronic pain from neuro or muscular degeneration or injury”.	16,945	7.8%	5,015	3.4%
4. Only “chronic pain” or “pain” reported.	4,451	2.1%	27,361	18.5%
5. One or more symptoms, diseases, or disorders for “chronic pain from neuro or muscular degeneration or injury” (e.g., cervical or lumbar pain, degenerative disc/joint disease, muscle spasms, myopathic encephalopathy, restless leg syndrome, rheumatoid/osteoarthritis).	3,345	1.5%	102,876	69.5%
6. Digestive (e.g., abdominal pain, anorexia loss of appetite, celiac disease, colitis, diabetes, diverticulitis, irritable bowel syndrome, nausea, pancreatitis, vomiting, wasting syndrome)	2,727	1.3%	6,821	4.6%
Combined total for medical conditions identified 201 times¹ or less: circulatory, genetic, genitourinary, infectious disease, ophthalmological, respiratory, and/or skin and connective tissue.	1,657	0.8%	3,573	2.4%
Unable to determine	6,727	3.1%	5,889	4.0%

Number of distinct patients:	176,928		127,316	

¹ Patients may have multiple certifications and 1 to 5 medical conditions.

IV. Trends in Orders by Type, Route, and Average Daily Dose

Data in this section refers to the total number of orders across all certifications, or to the average daily dose ordered per physician by route and type. Within each certification, the number of orders and the maximum daily dose in milligrams per day (mg) for any order, route, or type can vary.

Tables 8 and 9 provide the total number of orders by type and route for all certifications between October 1, 2018, and September 30, 2021. The increase in number of certifications increases the number of orders. Sublingual and Suppository order counts continue to increase more rapidly than other routes of administration.

Table 8: Total number of orders for low-THC cannabis, by route, in all certifications in each data set. Edibles as a route of administration became available August 27, 2020.

Route	2020 Report	2021 Report	2022 Report	Percent Change 2021 to 2022
Edibles	-	163,219	2,689,399	N/A ¹
Inhalation	308,841	1,704,359	2,687,859	58% ↑
Oral	328,842	1,739,225	2,716,443	56% ↑
Sublingual	80,910	867,547	2,450,970	183% ↑
Suppository	6,704	120,352	344,009	186% ↑
Topical	251,220	1,650,309	2,630,492	59% ↑

¹A full year comparison cannot be made.

Table 9: Total number of orders for medical marijuana, by route, in all certifications in each data set. Edibles as a route of administration became available August 27, 2020.

Route	2020 Report	2021 Report	2022 Report	Percent Change 2021 to 2022
Edibles	-	199,677	2,782,254	N/A ¹
Inhalation	407,855	1,837,293	2,785,813	52% ↑
Oral	376,350	1,827,093	2,783,727	52% ↑
Sublingual	98,005	1,027,120	2,529,676	146% ↑
Suppository	7,592	140,161	351,202	151% ↑
Topical	292,757	1,726,214	2,703,104	57% ↑

¹A full year comparison cannot be made.

Tables 10 and 11 show the statewide average of the physician’s average daily dose ordered in milligrams per day (mg) for six routes of low-THC cannabis and medical marijuana. With three full years of data, changes in trends were noted in the average daily dose amounts ordered.

Physician Certification Pattern Review, 2022 Annual Report

Comparing the 2021 report with the 2022 report, *and including outlier* amounts, Low-THC cannabis average daily dose amounts ordered have increased for Edible, Sublingual and Suppository routes by 40%, 11%, and 17% respectively. In contrast, only the average daily dose amount ordered for the Inhalation route decreased in 2022, by 54%. For Oral and Topical routes, the average daily dose amount ordered changed little compared to the 2021 report, increasing by 1% or less.

For the 2021 report and 2022 report comparison of medical marijuana average daily dose amounts ordered, *including outlier* amounts, Edible and Suppository routes showed the greatest increases, by 38% and 24% respectively. Inhalation, Sublingual, and Topical routes increased less, 7%, 2%, and 9% respectively. Only the Oral route had a decreased average daily dose amount ordered, 21% less in the 2022 report compared to the 2021 report.

In order to retain all data observations and make comparisons without the skewing caused by outlier amounts, the data presented here also includes a geometric mean (GeoMean) calculation. A geometric mean uses all data observations to create a mean closer to the median. The usual average calculation (arithmetic mean) is provided for comparison, as are descriptive statistics for each data set, i.e., the range of numbers high to low, the median or middle point, and the mode or most frequently occurring number. See the definitions section for more detail on geometric mean calculations and outliers.

Table 10: Statewide average daily dose (mg) from all physician’s average daily dose for low-THC cannabis, in Edible, Inhalation, and Oral forms, in each data set. Edibles as a route of administration became available August 27, 2020. Number of physicians with orders in each year is included in brackets.

Low-THC	EDIBLE		INHALATION			ORAL		
	2021 [920]	2022 [1,475]	2020 [1,196]	2021 [1,393]	2022 [1,459]	2020 [1,234]	2021 [1,436]	2022 [1,509]

V. Top Five Physicians by Reporting Measures

The following tables provide information on the top five physicians in each data set and include:

1. Number of certifications.
2. The number and physician’s percentage of the top three qualifying conditions: (f) PTSD, (k) Medical Conditions of the Same Kind or Class as or Comparable to those enumerated in paragraphs (a)-(j), and (m) Chronic Nonmalignant Pain. Physician Specialty Area as provided in the Practitioner Profile in the MQA Licensure Database is included, if available.
3. The highest average maximum daily dose in milligrams per day (mg) by type and route.

Note:

1. By statute, allopathic and osteopathic physicians are not required to include or update specialties in the Practitioner Profile. Specialty information in Tables 15, 16, 17, 34, 35, and 36 is as of October 1, 2021, and may not reflect current information.
2. Physician license numbers in this section have been de-identified with a unique identifier (UID).
3. Patients may have more than one qualifying condition in a single certification, and more than one certification in a reporting period.

1. Physicians with the Highest Number of Certifications

VII. Summary of the 2022 Annual Report

Physician certifications created for qualified patients each month show a cumulative increase for each year of reporting. For example, certifications doubled from January 2018 compared to January 2019 (16,373 to 32,705), then increased by 74% (to 51,478) for January 2020. From January 2020 to January 2021, certifications per month increased more slowly, 48% (to 76,262). The most recent monthly count was 87,721 for September 2021.

New patient enrollment each month initially increased quickly, by 73% from January 2018 compared to January 2019 (9,394 to 16,228) but has been more stable since then. Enrollments increased by 17% (to 18,979) for January 2020, and by 27% (to 24,135) for January 2021. New patient enrollments per month peaked in April 2021 (30,997). The most recent monthly count was 22,825 for September 2021.

The average daily dose ordered for low-THC cannabis and medical marijuana has changed slightly since the 2021 report. The amounts ordered for marijuana in a form for smoking remain consistent with previous reports.

Data Tables for Physician Certifications contain detailed certification data for individual qualified physicians, and in the aggregate, by county and statewide, and is provided as a separate document.

Panel Recommendations from 2021 Report

Request to the Legislature:

- Amend section 381.986(3), F.S., to require qualified physicians to update their Practitioner Profile, and include every secondary practice location where the qualified physician issues certifications for a qualified patient to receive medical marijuana.

Requests to Panel Support Staff:

- Include distribution details for physicians by categories such as number of certifications, average daily dose, and specialty areas.

While OMMU has made a substantial investment toward internal control of data, detailed distribution (dispensation) data across multiple variables were not available for the 2022 report.

- Include details on medical conditions the physician identified as being of the same kind or class as or comparable to Post Traumatic Stress Disorder (PTSD).

This information is provided in Section III, Trends in Patient Qualifying Condition, page 9.

VIII. Panel Recommendations for 2022

Requests to Panel Support Staff:

1. Consider comparable data from other states or jurisdictions for future reports, if applicable.
2. Present data using the geometric mean versus the average in future reports.
3. Include an emphasis on the unreliability of physician primary practice location information.
4. Provide a break-down of physicians with certifications greater than 1,000 or more into smaller groups (adding 2,000 and 5,000 or more).
5. Change the data cycle from October 1 through September 30 to July 1 through June 30 to align with the fiscal year in future reports.

IX. Terms and Definitions

Average (AVG) daily dose is the average of all *maximum* daily doses ordered within a physician certification by route of administration and type (low-THC cannabis or medical marijuana).

Average ounces are the average of all “total ounces per 35-day order period of marijuana in a form for smoking” by certification, physician, county, or state.

Cannabidiol (CBD) for low-THC cannabis ordered by route(s) in the Medical Marijuana Use Registry is measured in milligrams per day.

Chronic nonmalignant pain means pain that is caused by a qualifying medical condition or that originates from a qualifying medical condition and persists beyond the usual course of that qualifying medical condition.

County is based on the primary practice location (address) physicians provided in the Medical Quality Assurance Licensure Database.

Dose is the milligrams (mg) per day for each route of administration a physician recommends in the Medical Marijuana Use Registry as part of a certification for marijuana. The “total mg/day” is the sum of all doses for a given form and type of marijuana ordered. All dose data entered was used.

Form is a term referenced in section 381.986, F.S., to describe the routes of administration.

Geometric mean is a method for describing the central tendency of a set of numbers by finding the product of their values. An arithmetic mean adds numbers instead of multiplies them. The geometric mean is used when there are large fluctuations in a data set to prevent outliers from skewing result, yet still included those data points in the analysis.

Low-THC cannabis means a plant of the genus *Cannabis*, the dried flowers of which contain 0.8 percent or less of tetrahydrocannabinol and more than 10 percent of cannabidiol weight for weight; the seeds thereof; the resin extracted from any part of such plant; or any compound, manufacture, salt, derivative, mixture, or preparation of such plant or its seeds or resin that is dispensed from a medical marijuana treatment center.

Marijuana means all parts of any plant of the genus *Cannabis*, whether growing or not; the seeds thereof; the resin extracted from any part of the plant; and every compound, manufacture, salt, derivative, mixture, or preparation of the plant or its seeds or resin, including low-THC cannabis, which are dispensed from a medical marijuana treatment center for medical use by a qualified patient.

Medical marijuana treatment centers (MMTCs) are licensed by the state to grow, process, and dispense marijuana to qualified patients who have certifications and identification cards issued by the Office of Medical Marijuana Use.

Medical Marijuana Use Registry (MMUR) is a secure, electronic, online medical marijuana use registry for physicians, patients, and caregivers that is accessible to law enforcement agencies, qualified physicians, and medical marijuana treatment centers.

Medical use means the acquisition, possession, use, delivery, transfer, or administration of marijuana authorized by a physician certification. The term does not include:

1. Possession, use, or administration of marijuana that was not purchased or acquired from a medical marijuana treatment center.

Physician Certification Pattern Review, 2022 Annual Report

2. Possession, use, or administration of marijuana in the form of commercially produced food items other than edibles or of marijuana seeds.
3. Use or administration of any form or amount of marijuana in a manner that is inconsistent with the qualified physician's directions or physician certification.
4. Transfer of marijuana to a person other than the qualified patient for whom it was authorized or the qualified patient's caregiver on behalf of the qualified patient.
5. Use or administration of marijuana in the following locations:
 - a. On any form of public transportation, except for low-THC cannabis not in a form for smoking.
 - b. In any public place, except for low-THC cannabis not in a form for smoking.
 - c. In a qualified patient's place of employment, except when permitted by his or her employer.
 - d. In a state correctional institution, as defined in section 944.02, F.S., or a correctional institution, as defined in section 944.241, F.S.
 - e. On the grounds of a preschool, primary school, or secondary school, except as provided in section 1006.062, F.S.
 - f. In a school bus, a vehicle, an aircraft, or a motorboat, except for low-THC cannabis not in a form for smoking.
6. The smoking of marijuana in an enclosed indoor workplace is defined in section 386.203(5), F.S.

Medical Quality Assurance (MQA) Licensure Database contains information on health care practitioners in the state of Florida licensed under chapter 458, F.S., and chapter 459, F.S. The information includes an indicator for physicians who have qualified to order low-THC cannabis and medical marijuana for qualified patients.

Office of Medical Marijuana Use (OMMU) is charged with writing and implementing the Florida Department of Health rules for the use of marijuana, overseeing the statewide Medical Marijuana Use Registry, and licensing Florida businesses to cultivate, process, and dispense marijuana to qualified patients. More information about the Medical Marijuana Use Registry is available online at the Office of Medical Marijuana Use website: <https://knowthefactsmmj.com/>

Orders refer to consecutive order periods, up to three, each with a maximum number of 70 days. Within the 70-day period, physicians can choose to order 10 options: low-THC cannabis and/or medical marijuana in up to five different routes of administration.

Physician certifications for marijuana in a form for smoking may have up to six order periods, each with a maximum number of 35 days.

Outliers are individual data observations (such a mg/dose or total supply amount in mg) that are an abnormal distance from all other data observations in the set. Observations that fell more than 1.5 interquartile ranges below the first quartile or above the third quartile were considered outliers and removed from calculations for average daily dose and supply totals.

Physician certification means a qualified physician's authorization for a qualified patient to receive marijuana and a marijuana delivery device from a medical marijuana treatment center.

Physician county data is pulled from the most recent data available relative to the end of the reporting period. "Not Practicing" physicians had an active status in the MQA Licensure database when county information was accessed; "Out of State" physicians had out-of-state addresses but were otherwise listed as active status.

Practitioner Profile information is drawn from the Division of Medical Quality Assurance’s Licensure Database and contains physician information that is posted in the online License Verification search.

Qualified patient means a resident of this state who has been added to the Medical Marijuana Use Registry by a qualified physician to receive marijuana or a marijuana delivery device for medical use and who has a qualified patient identification card.

Qualified physician means a person who holds an unrestricted license as an allopathic physician under chapter 458, F.S., or as an osteopathic physician under chapter 459, F.S., and is in compliance with the physician education requirements of subsection (3) of 381.986, F.S.

Qualifying medical conditions are required for physician certification. A patient must be diagnosed with at least one of the following conditions to qualify to receive marijuana or a marijuana delivery device:

- | | |
|--|--|
| (a) Cancer | (i) Parkinson’s disease |
| (b) Epilepsy | (j) Multiple sclerosis (MS) |
| (c) Glaucoma | (k) Medical conditions of the same kind or class as or comparable to those enumerated in paragraphs (a)-(j) |
| (d) Positive status for human immunodeficiency virus (HIV) | (l) A terminal condition diagnosed by a physician other than the qualified physician issuing the physician certification |
| (e) Acquired immune deficiency syndrome (AIDS) | (m) Chronic nonmalignant pain |
| (f) Post-traumatic stress disorder (PTSD) | |
| (g) Amyotrophic lateral sclerosis (ALS) | |
| (h) Crohn’s disease | |

Routes of administration is defined in emergency rule 64ER20-31. F.A.R., as the appropriate method for the usable product to be taken into the body of the qualified patient, as certified by a qualified physician.

Smoking means burning or igniting a substance and inhaling the smoke. As permitted by section 381.986(4)(c), F.S., qualified physicians may determine that smoking is an appropriate route of administration for a qualified patient.

Supply is the total amount in milligrams (mgs) for all orders within a certification (daily dose multiplied by the number of days ordered) for all routes of administration other than smoking. For smoking, supply is the total amount in ounces (oz) for all orders within a certification.

Terminal condition means a progressive disease or medical or surgical condition that causes significant functional impairment, is not considered by a treating physician to be reversible without the administration of life-sustaining procedures and will result in death within one year after diagnosis if the condition runs its normal course.

Tetrahydrocannabinol (THC) for medical marijuana ordered by route(s) in the MMUR is measured in milligrams per day.

Type is low-THC cannabis or medical marijuana.
